VSA™
by Kaseya

SOFTWARE MANAGEMENT FEATURE BRIEF
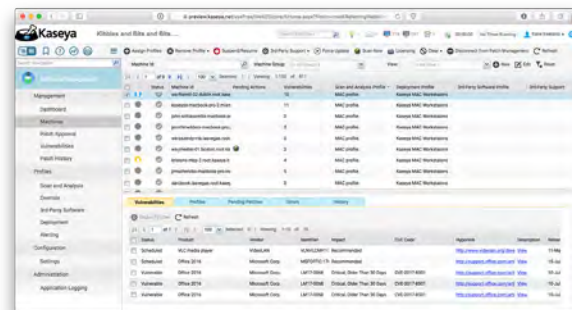

## Have confidence your network is fully up-to-date!

OVERVIEW

Software Management is a NEW core module within VSA that unifies patching for Windows and Mac OS, as well as third-party software, and provides the Administrator with capabilities to comprehensively automate updates and see vulnerabilities in real time. The Software Management Module can install, deploy, and update software for both on- and off-network devices, simplifying the work involved in keeping your network current.

KEY FEATURES

Vulnerability detection	Rapid distribution, on and off network	Scan & analysis functionality	Scheduling	Policy profiles for automation of approval, review, or reject	Ability to override profiles	Migration from VSA Patch Management Module
