

SA Guardian

StaffAlerter SA-Alert and Personal Alerting Device (SA-PAD)
Providing security for hospitality workers

Security for Hospitality Workers

PM Power Products LLC SA Guardian™, the latest addition to the StaffAlerter Control and Notification System, has been developed for the hospitality market to insure hospitality staff have the means to call for help should they find themselves in danger or requiring immediate assistance.

Comprised of the SA-Alert audio and visual alerting system and the SA-PAD (Personal Alerting Device), SA Guardian allows workers to carry out their tasks knowing help is just a press of a button away. SA-PAD supports 3 different messages and connects to your Wi-Fi allowing multiple persons to be notified through the push of a button. Alerts to security can be sent as text, SMS, or phone calls with a prerecorded announcement specific to the alerting SA-PAD.

Multiple SA-PADs can be associated with a single SA-Alert to allow groups working in a specific area to share the SA Alert device, thus decreasing deployment costs.

The SA-Alert can be mounted on a housekeeping or other cart, and when activated, will provide a bright flashing lamp and loud piercing siren to alert nearby persons to the situation in addition to sending notifications to security. Worker safety is more than social risk, and those in the hospitality industry face environmental as well as natural health risks. SA Guardian can provide reassurance that help is only a button push away.
