

Axis Communications' Academy

Course description

Entry Management System Training

Length: 1 day
Format: classroom

Course description

Empowering partners with the best practices of access control, this course is designed to introduce a new era of Axis products. Through a combination of instructor-led presentations and interactive labs, attendees will receive the knowledge needed to build the foundation for a non-proprietary and scalable IP access control solution with the AXIS A1001 Network Door Controller and AXIS Entry Manager.

Course objectives

The objectives of this training are for participants to:

- > Understand the main components of an access control system and differences between distributed and centralized designs
- > Become familiar with safety and security challenges surrounding access management
- > Be able to install and configure an AXIS A1001 Network Door Controller with the built-in AXIS Entry Manager web-based software

Who should attend?

Professionals involved with system design, installation and configuration of access control products.

Prerequisites

We strongly recommend that participants have some knowledge of physical security or access control systems.
