PropStop™ Detects Doors Propped Open

Door propping is a significant breach of a facility security plan. StaffAlerter PropStop detects this threat and reports. Know what's happening in your location.

PropStop utilizes the StaffAlerter Cloud to notify users of conditions like door propping via SMS, Calls or Email or on a mobile device with SA-Inform.

Additional actions that can be executed include overhead pages, activation of StaffAlerter relays to activate other signals and systems as required.

The PropStop unit includes a sensor, rechargeable Li-Ion battery, and a wide gap door contact. Typical battery life is 13k-15k actuations before charging is needed.

PropStop is a Wi-Fi connected, battery powered device that mounts to any door. Information on the door position is sent to the StaffAlerter Dashboard for status. A time value is set to determine what period a door is left open before the system determines a propped open condition exists.

PropStop can be deployed as a standalone device, the Push Service (standalone smart device notification) and SA-Inform providing mobile alerts to the StaffAlerter application. These options provide the individual or small groups with up to date door status.

StaffAlerter Dashboard provides real time status of all doors in your facility

Utilizing the StaffAlerter platform, a facility can monitor and control any device or system from a central cloud-based solution.
