

# CareHawk Schools: Providing Safety Through Technology

Mass Notification Solutions Vital  
for Schools and Campuses

# Serving Safer Schools Every Day and in Times of Crisis

We're dedicated to developing life safety communication technologies that **alert, inform, and instruct** staff and students through everyday activities and during emergency situations, so you can focus on what's important - **learning**.

## The Informed Classroom

Connect with the classroom and ensure staff and students receive timely, clear, and accessible alerts and instructions.

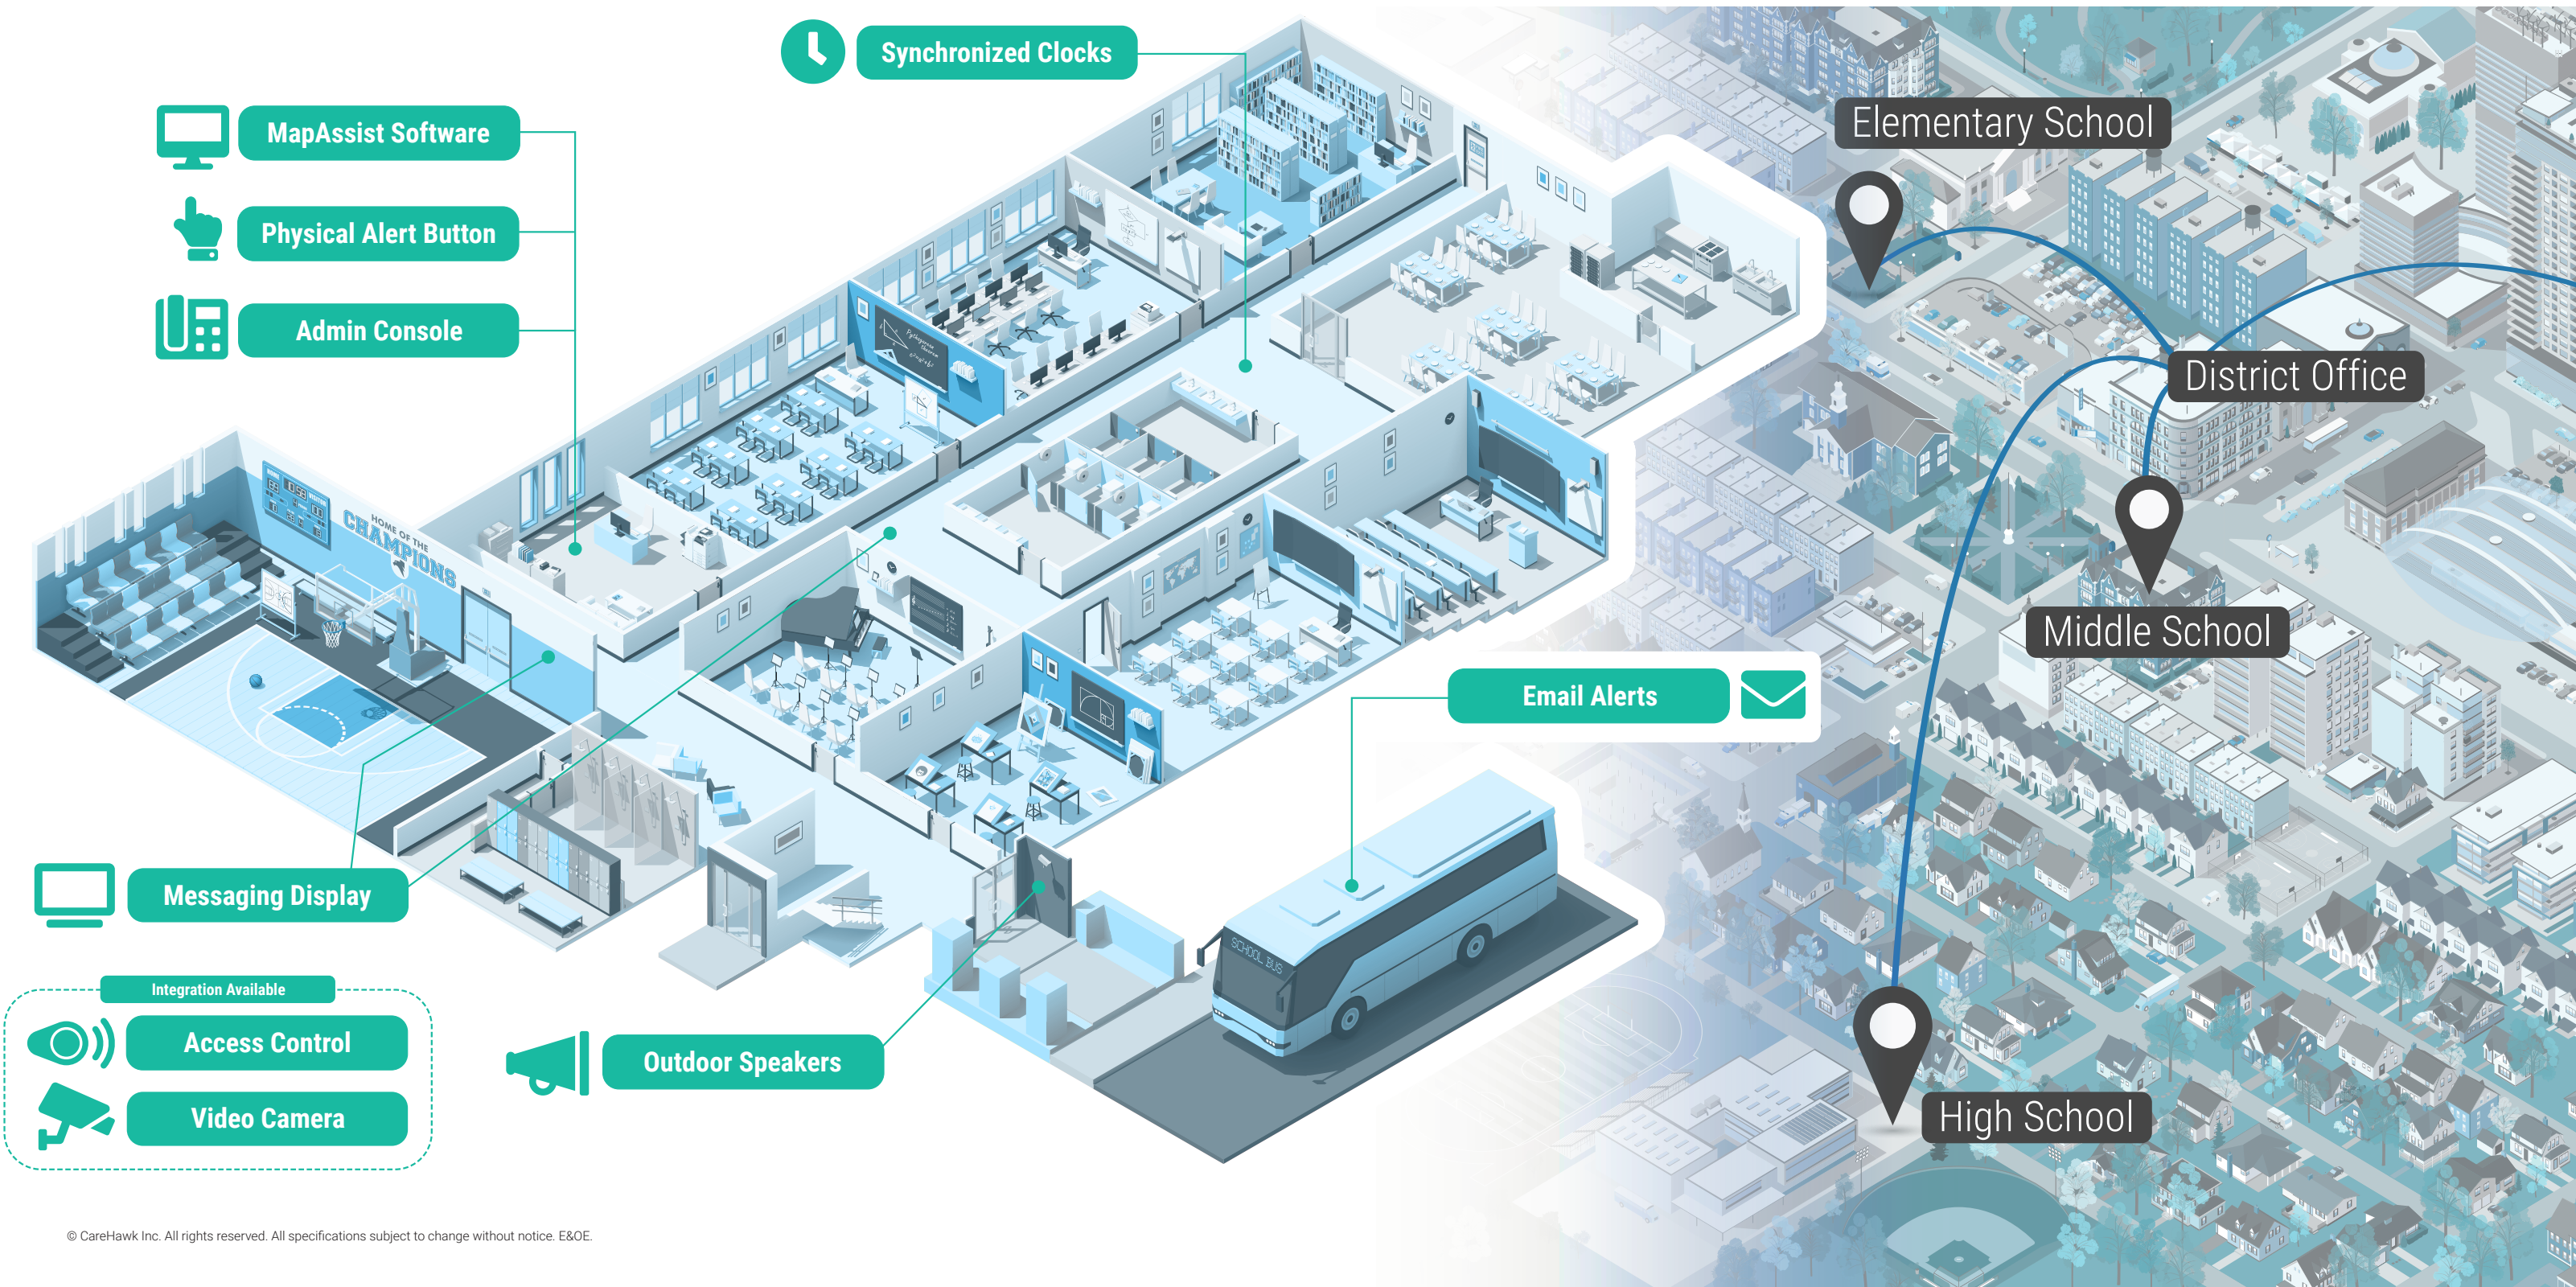

# Beyond the Classroom

Communications in hallways, on school grounds, and beyond.

# Connect the Entire District

District administrators can initiate lockdowns, weather alerts, or pages to a single school or all of the schools in your district simultaneously.

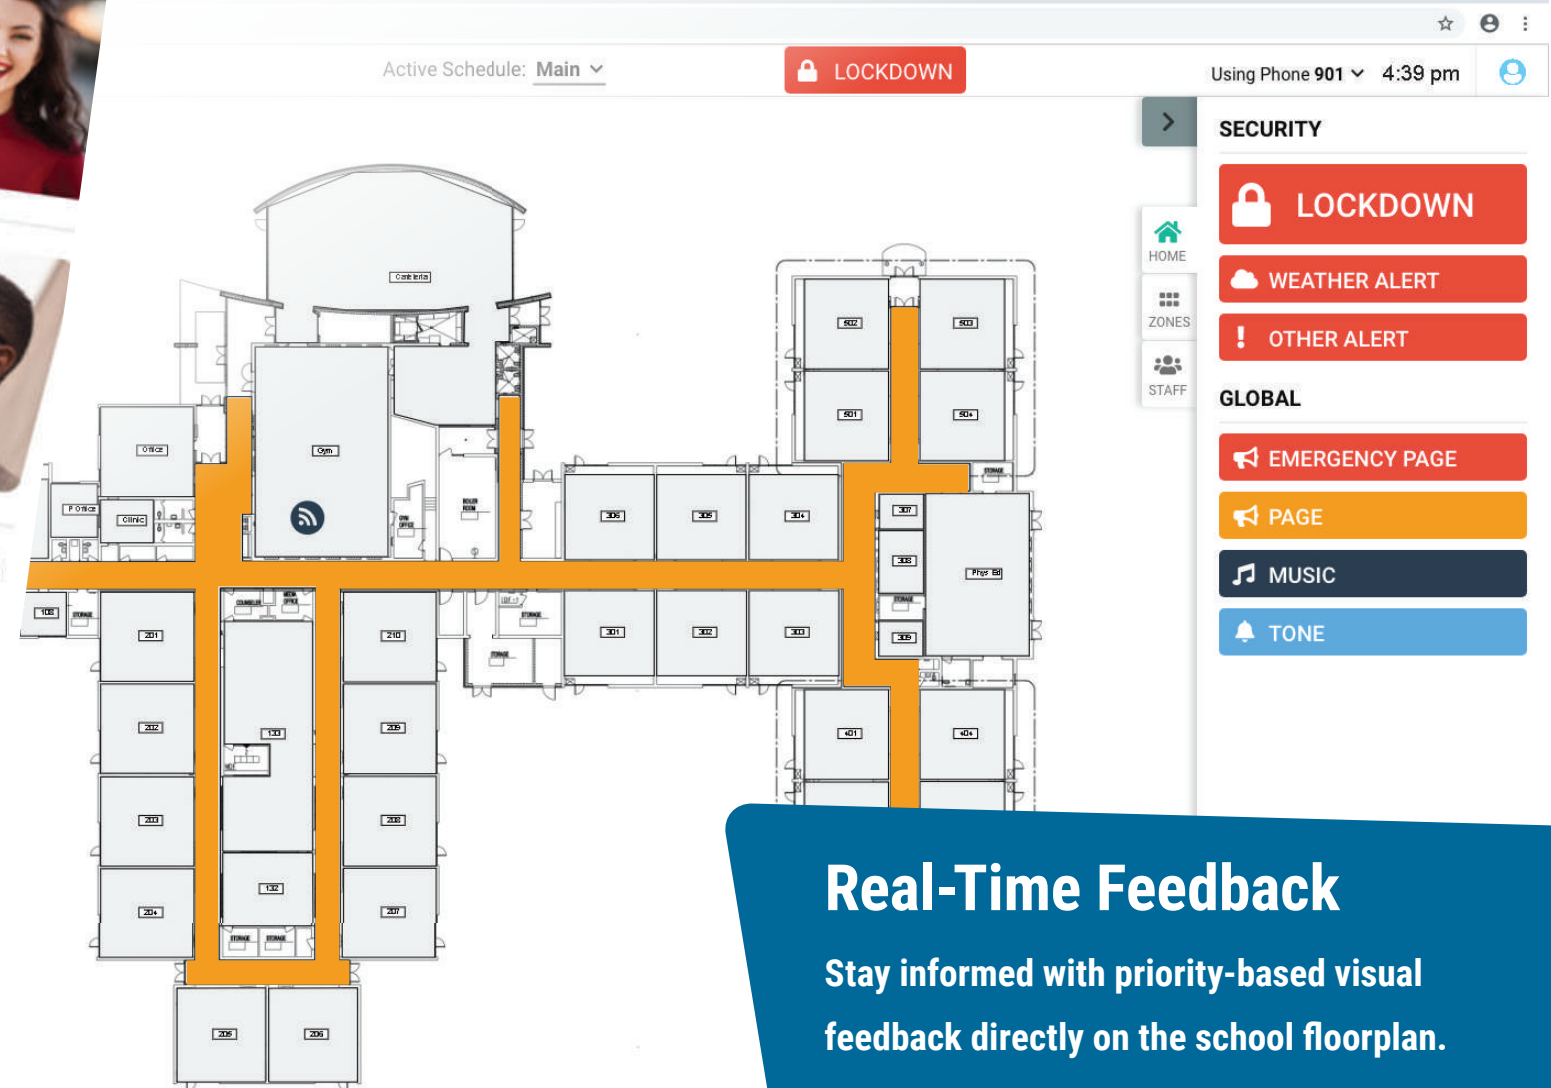

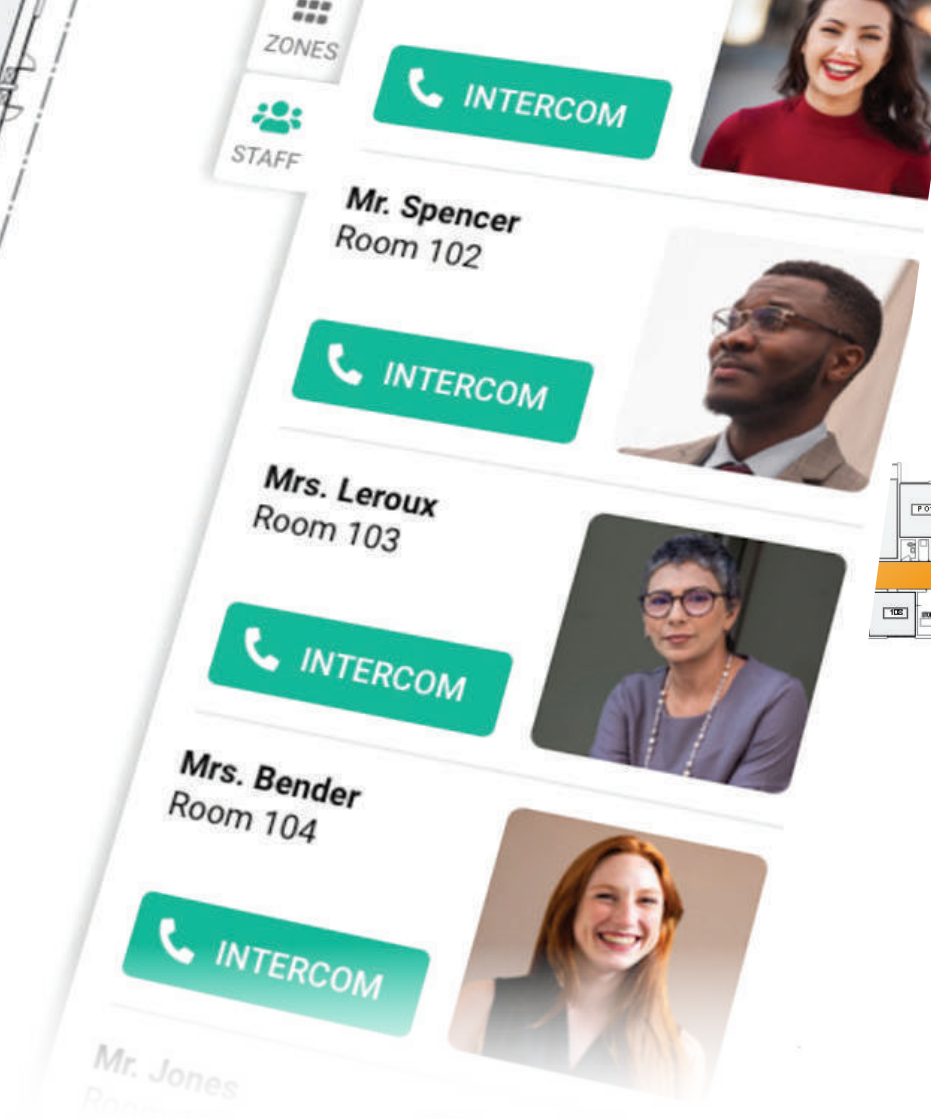

# Your School Floor Plan as an Interactive Dashboard

Forget the phone codes and recycle your cheat sheet!

With the touch of a finger, initiate, view and respond to your daily communications in real-time with MapAssist™ or the Admin7 Console.

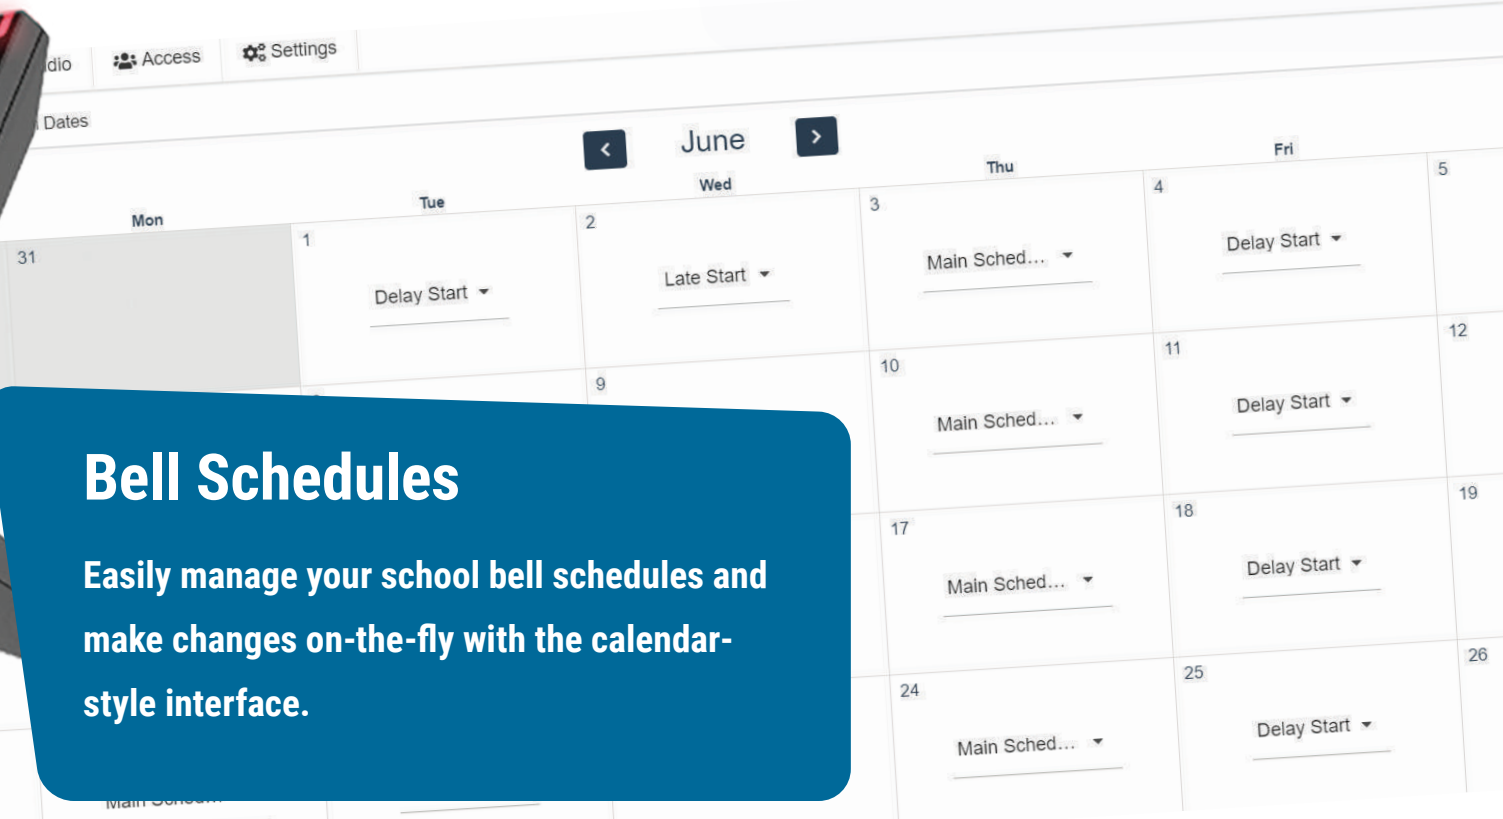

## Real-Time Feedback

Stay informed with priority-based visual feedback directly on the school floorplan.

## Bell Schedules

Easily manage your school bell schedules and make changes on-the-fly with the calendar-style interface.

# Your Messages Are Seen and Heard

A network of CareHawk® messaging displays combines visual messages in tandem with audio alerts for accessible communication and improved student and staff safety.

Trigger alerts quickly with the touch of a button or in the palm of your hand with the VCall+ mobile app.

## New Install or Retrofit, You're Covered

### Do you have an aging system?

We can work with your existing infrastructure, like cabling and analog speakers, to bring your school into the 21st century!

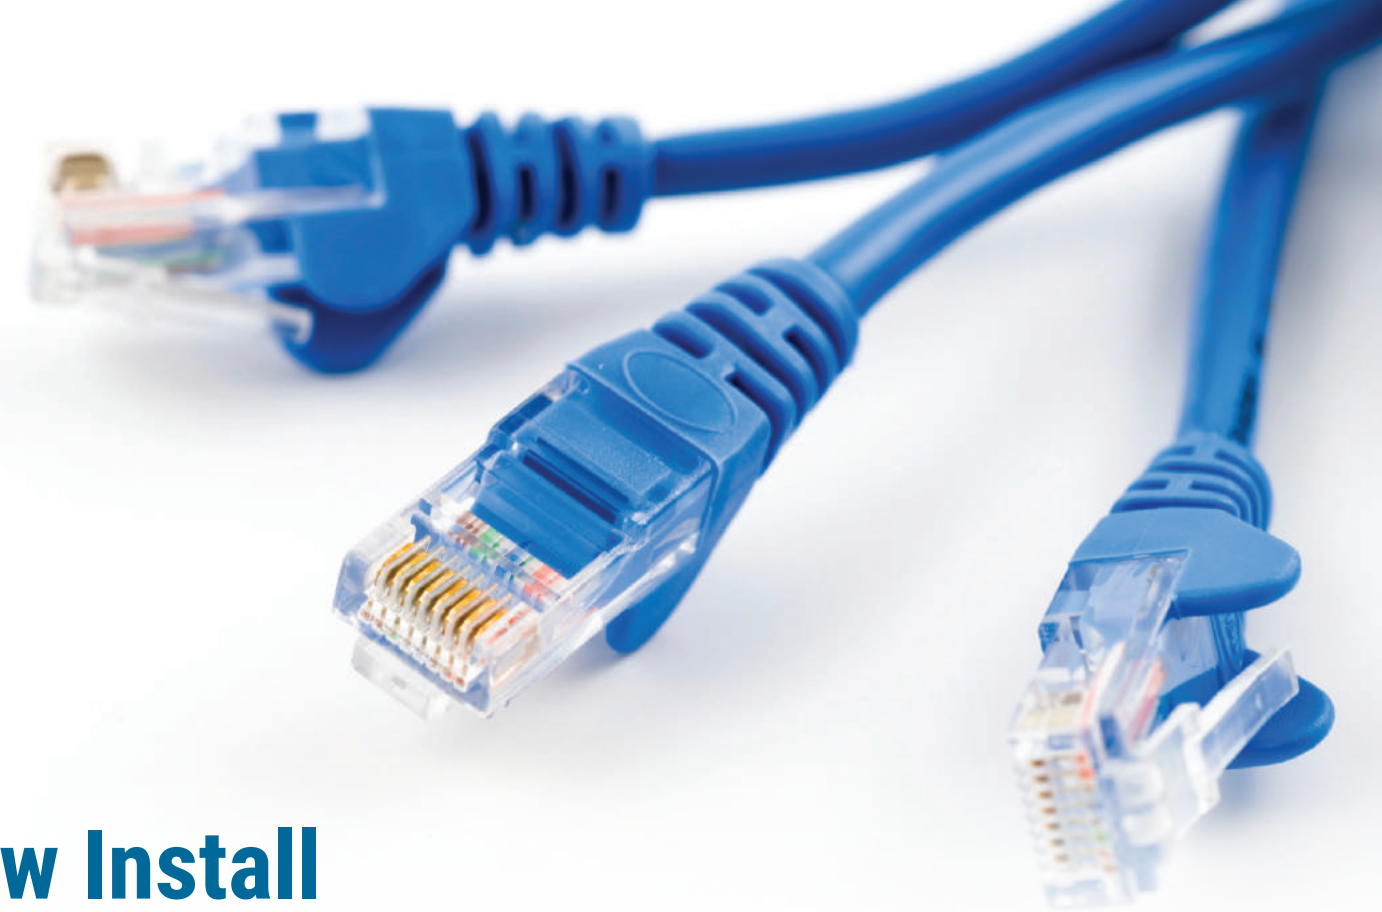

### Need an Analog Solution?

Our hybrid/analog solutions have stood the test of time.

You can still enjoy a modern user-experience with MapAssist™, even if your infrastructure is maturing.

## Looking to Go IP?

Great! Our IP solutions are perfect for your new installation or for schools with more advanced network capabilities.

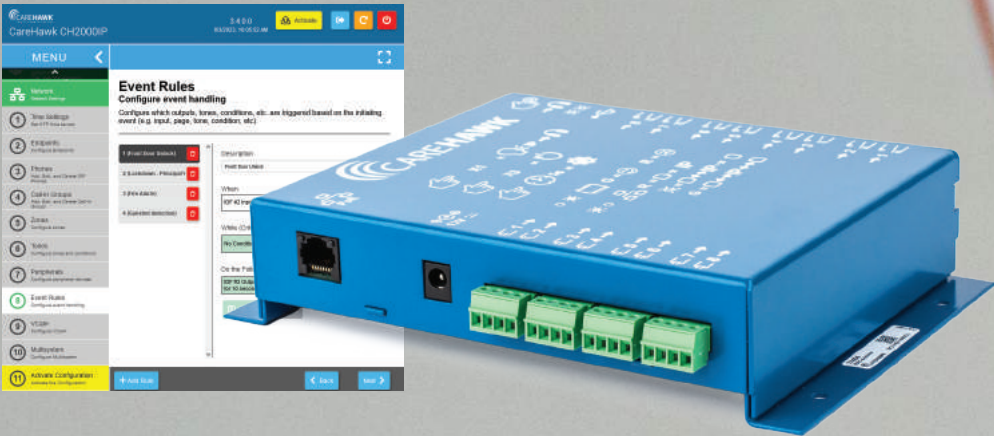

# Integration and Event-Based Automation

The GPIO Integration Hub simplifies connected processes by integrating independent security and emergency systems, automating and reducing the number of operations needed during a crisis.

Expand the possibilities of traditional GPIO integration with software and use event-based automation for unprecedented flexibility.

### Event-based automation examples:

- ✓ Mute music and non-essential communication during a fire alarm.
- ✓ With the press of a button, comply with Alyssa's Law and connect to 911 during an active assailant event.
- ✓ Control electronic door locks at entryways.

# We're Here to Support You

With over **200 Certified Partners** throughout North America, we're with you every step of the way, from selecting the right base system to applying our expertise to your particular facility and communication priorities.

With our certified partners and technical support team, you're always in good hands.
